

Benoy ID Current & Future

About us

The London studio's work spans the globe - from the UK domestic market, EMEA and beyond to Asia and North America, overlapping with and contributing to our other regional offices.

Our team reflects our diverse portfolio - we are designers from all over the world, all working to deliver fantastic projects on the global stage.

We're looking for ambitious designers who can contribute their unique creative perspective to our increasing roster of projects; you'll get to grow by working for some of the most prestigious clients and projects being commissioned today.

on the drawing board

What to expect

We sketch, moodboard, ideate, model, draw, sample, strategise, visit and collaborate. Every project is different and we approach each with an open mind, never implementing a preconceived style.

Our team works primarily in Rhino3D, Enscape, Revit and AutoCAD, Adobe Creative Suite and Microsoft Office to produce our work, edit it and present it.

Our technology team provide support in utilising emerging tools like VR, animation, AI, Grasshopper and automation softwares so we spend more time designing while making delivery more efficient and presentations more engaging.

We want ambitious designers who are passionate about their work, with the persistence to see it built.
